

To find out **Who Killed Santa?**
you need to make a map of
Santa Town

Copy this picture and work out
who lives where

To find out **Who Killed Santa?**
work out how far everybody
walked on Christmas Eve. The
distance between any two
houses is 5 reindeer miles.

People always go by the most
direct route.

Copy out this table and fill in
your results -

Santa	
Blue	
Green	
Orange	
Pink	
Red	
Yellow	

Red went to see Santa and then
left a present at Orange's House.
Then he went home.

Orange went to deliver cards to
Yellow, then Green, then went
home.

Yellow left his house and went to
call for Green. They both went to
watch a DVD at Orange's House.

Red lives in the house that is
furthest West.

Blue lives between Red and
Orange.

Santa stayed at home all day.

The two prime suspects both
walked the same distance on
Christmas Eve.

Yellow lives between Pink and
Green.

Red lives diagonally opposite
Pink but there is no road joining
them directly.

Pink went to Red's House, and
then went home.

Santa lives in the middle of Santa
Town. All the other houses are 5
reindeer miles from his house.

Blue had to deliver a card to
everyone in Santa Town and
then go home.

When you know the two prime
suspects, put them in
alphabetical order. The killer's
name isn't first.

Orange and Green live at
opposite ends of the diagonal
road. Green lives further south
than Orange.
