1. Calculation of the Rebate

- a. The Rebate is calculated by establishing the number of days that have elapsed between the Calculation Trigger Date and the Invoice Payment Date and comparing the number of days elapsed within the first column of the table above to determine the Rebate to be applied to the invoiced amounts. The Rebate percentage (%) is calculated to 14 decimal places and it is this value that is applied in all calculations. However, for simplicity, the Rebate % displayed in the table above has been rounded to 2 decimal places.
- b. Rebates applied to invoices are calculated at an invoice line item level. Rebates are applied in the manner described at (a) immediately above, against the value of each line item. The result of this calculation is rounded to the nearest pence. Once the Rebates for all line items have been calculated, they are aggregated to provide the total Rebate value to be deducted from the Supplier's invoice on early payment of the invoice.

2. The Authority shall issue a debit note indicating the value of the Rebate that has been applied.
